PROFESSIONAL SUMMARY

Backend Engineer with 2.5+ years of experience building scalable, production-grade systems using Node.js, NestJS, TypeScript, Redis, PostgreSQL, and AWS. Strong experience in microservices, async processing, queues, caching, and cloud infrastructure. Proven ability to deliver features end-to-end, collaborate cross-functionally, and optimize systems for performance and scale.

EXPERIENCE

Full Stack Engineer — SlideCoach Remote | Dec 2024 – Present

- Built scalable backend services using NestJS, TypeScript, PostgreSQL, and Redis.
- Designed and operated AWS infrastructure (EC2, ASG, Target Groups, S3) for high availability.
- Implemented async and background processing using BullMQ and Redis Streams.
- Developed internal shared packages (entities, migrations, utilities) to improve developer velocity.
- Delivered core features including document processing, content generation pipelines, and real-time feedback systems.
- Improved performance and reliability using caching, async workflows, and monitoring.

Full Stack Engineer — Kognics Remote | May 2023 – Nov 2024

- Built backend services using Node.js, Express.js, MongoDB, and SQL.
- Developed CRM and LMS platforms with REST APIs and role-based access control.
- Implemented WhatsApp automation workflows to drive customer engagement.
- Delivered white-label backend solutions supporting multiple clients.
- Worked on scalable features for automation, notifications, and data management.

PROJECTS

• Next Chat

Built a scalable chat application utilizing **TypeScript**, **Node.js**, and **Next.js** for backend and frontend development. Implemented **Docker** for containerization environment. Leveraged **Kafka** for event-driven , enabling real-time message. Integrated **Redis** for caching to optimize performance, while **PostgreSQL** was utilized for data storage [Github](#), [Website](#).

• Tweet

Architected and developed a tweet application leveraging **Google Authentication** for user authentication, JWT for secure token-based authentication, **socket io** for socket communication ,**GraphQL** for efficient querying of data, and **Redis** for caching and rate limiting. Utilized **PostgreSQL** for data storage [Github](#), [Website](#).

• Leplit

An Online Integrated Development Environment (IDE),Leveraging a powerful stack comprising **Socket.IO** for file communication, **Next-js** for robust server-side rendering and routing, **Node-pty** for efficient terminal process management, **xterm-js** for immersive terminal emulation, Typescript, **Node-js** for backend development, and **Docker** for streamlined containerization [Github](#), [Website](#).

• OgChess

Built a full-stack real-time multiplayer chess platform using Next.js, NestJS, PostgreSQL, TypeORM, Socket.IO, and chess.js with secure JWT authentication and server-side move validation. Implemented optimistic UI updates, matchmaking, live gameplay, reconnect support, and draw/resignation workflows. Developed responsive dashboards for game history and leaderboards with real-time synchronization [Github](#), [Website](#).

TECHNICAL SKILLS

Backend: Node.js, NestJS, Express.js, TypeScript

Databases: PostgreSQL, MySQL, MongoDB, Redis

Messaging & Queues: BullMQ, Redis Streams, Kafka, Celery

Cloud & DevOps: AWS (EC2, S3, ASG, Target Groups, AMI), NGINX, PM2

Architecture: Microservices, REST APIs, Event-Driven Systems

Tools: Docker, Git, CI/CD, React Query

Other: Twilio, WhatsApp Automation, Role-Based Access Control,grafana

EDUCATION

- B.Tech I.T | Enginnering College of Bikaner, Rajasthan
- XII (State Board) | Vidya Bharti ,Bikaner, Rajasthan

CGPA : 8.1 | (Nov 21 - Nov 25)

93% | (Year - 2021)
